NEURAL NETWORKS IN NEUROSCIENCE

30 November – 14 December, 2020
Online seminar series

Speakers

Prof. Christoph Braun PhD
University of Tübingen

Antonino Greco MSc
Università di Trento

Topic of the seminars

The seminar series is an introduction to the basis of deep neural networks and their applications to neuroimaging data. The seminars will consist of combined lectures (45 minutes) and exercises. During seminars attendees will be assigned specific data analysis tasks to be solved using Python. The final seminar will consist of an open discussion of previous assignments. It is advantageous to have some programming skills, not necessarily in Python.

The online seminars will be held through Zoom platform. All seminars will be recorded and made available upon request. Full scheduling and description of the seminars are available at the following webpage:
